

SUMMER 2009 / HISTORY 301.201

THE DISCOVERY OF THE UNIVERSE

This course is about recent discovery of the nature, history, and future of the universe. It is not a science course, but rather we look at the human stories of the women and men who slowly revealed the nature of the stars, the violence of our universe, and the enormity of it all. We will examine a number of associated issues: science and government, women's roles, science fiction, The Bomb, and the ways in which scientific lives mirror society's challenges.

Professor Rudi Lindner

**Tues/Thurs
7:00-10:00 p.m.
